

- Changed styles syntax in logo/index.js to camelCase.
- Slider we declare a “currentImg” to keep track of current image index number without a condition to check if data its fetched or not before assign value
- Slider useEffect dosnt have dependency array
- Slider we pass the image prop to the .map() method for the inputs
- Slider we add the readOnly property to avoid the user clicking
- Slider&Events modifications in Helper we changed the key values from numbers to strings to correctly acces their values(months)
- Form we call the onSuccess() function from parent component on form submit to change state in modal component
- Home we check if last its defined with a conditional rendering, then in the CONTEXT were we fetch the data, we sort the events by date and we store the last item in the "last" variable
- Events we import the getMonth() function from the helpers to display the correct month from the date in the eventCard component
- Context we add dependency array to useEffect
- Context we declare and provide a variable with last item in array
- Page added "id's" on the sections of the so the links on the top navbar are navigable
- Select we pass the value correctly to he onchange function
